(54) Title: A DEVICE FOR HEATING LIQUIDS, IN PARTICULAR MILK

(57) Abstract: A device for heating liquids (10), particularly milk, comprising a container (12) for the liquid to be heated operatively associated with heating means. The latter comprise a heating element (18) delivering variable power over time as a function of the temperature reached by the liquid. Particularly, the heating element (18) is suitable to reduce the power supplied with the increasing temperature of the liquid and is positioned so as to heat the bottom (14) of said container (12).
